

SynJ®

4-Line Corded/Cordless Small Business System

Up to 10 Cordless Handsets
and/or Cordless Desksets

Push-to-Talk Intercom

Up to Half Mile of Extended Range

Mobile Page & Conferencing

The pace of business is always accelerating and small businesses need tools that help them do more, faster and cost effectively. The SynJ® Small Business System from AT&T cuts reaction time to calls with Push-to-Talk Intercom and the exclusive SynJ DECT 6.0 repeater that extends the phone range to reach employees in warehouses.

The SynJ corded base supports four lines, each with an Automated Attendant, and up to 10 SynJ cordless accessory handsets and/or cordless desksets with individual voicemail. Each handset provides line status and message-waiting indication plus caller ID and call waiting information on a large lighted display. Mobile employees have easy access to Push-to-Talk Intercom, call transfer and 3-way conferencing as well as the choice of handset or speakerphone operation. The corded base will also pair with an AT&T TL7600 Cordless Headset to provide hands-free mobility.

How it Works

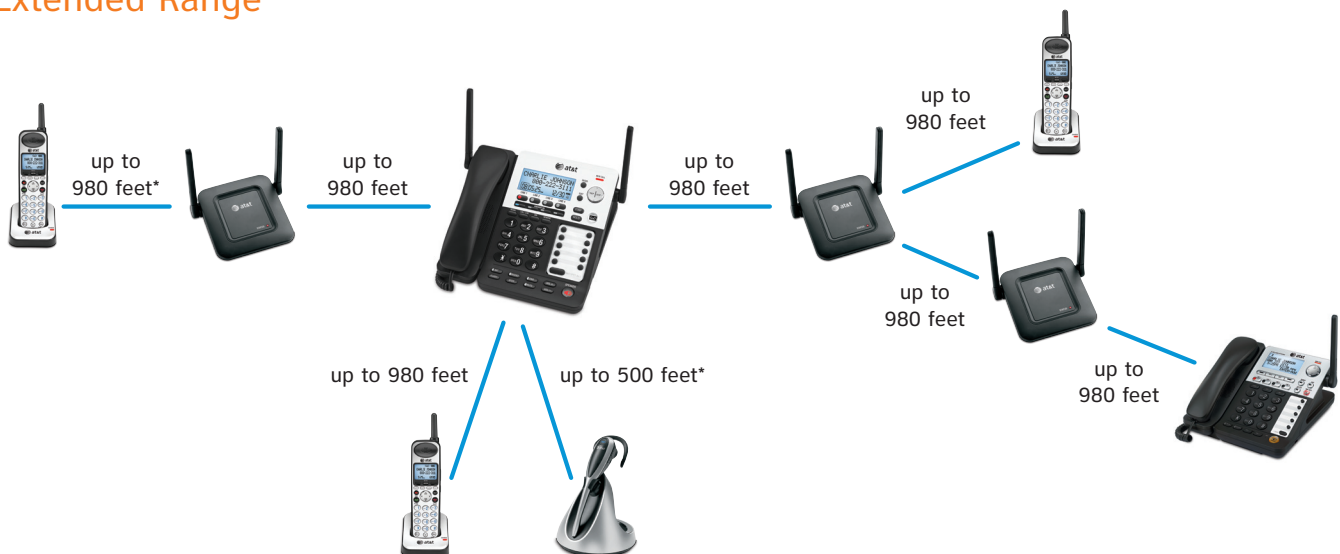

Repeaters can extend the range of the cordless handset. The SynJ DECT 6.0 cordless handsets and cordless desksets can operate up to a half-mile from the corded base with optional SynJ repeaters. The base supports up to six repeaters with no wired connection to the base. Just plug them into an AC outlet and you're free to roam. Active calls will be handed off from base to repeater to repeater while you take care of business.

The AT&T TL7600 Cordless Headset provides hands-free mobility of up to 500 feet when paired with the corded base.

Push-to-Talk Intercom eliminates delays and distractions by providing instant communication with any extension or all extensions. Watch customer satisfaction go up as response times come down.

Extended range—have the freedom to roam up to 2940 feet from the base with the use of repeaters and cordless handsets. Up to 2 repeaters can be linked in sequence with each base, offering up to 980 feet of additional range per repeater. By linking repeaters together, you can extend the range of the wireless signal up to 2940 feet.

Extended Range

* Open range test was performed by Wyle Laboratories, an independent commercial test facility. "Up to 980 feet" repeater range and "up to 500 feet" cordless headset range refers to the maximum open field range. Actual range may vary depending on intervening obstacles.
